Pre-Engineered Acoustic Solution in a Box

CloudPanel™
* For better results:

Apply **Cell-Spray®** throughout the ceilings.

Product Description

PAC Studio Panel is an effective solution for studios and home theaters. It is economical and easy to install with complete acoustic treatment for studios and home theaters. It is pre-manufactured based on scientifically designed building blocks for easy design and development.

PAC Studio Panel improves focus, imaging, localization, and overall accuracy without complex acoustical calculations or placement adjustments. Each set of the kit is pre-engineered to provide optimum absorption and diffusion for any room size. For optimum results: Insul-Pac can be used for treatment of your wall partition and Cell-Spray to be applied onto ceilings.

Room acoustics affect any studio monitoring system. Without proper and accurate treatment, there will be loss of important

elements within the mix.

Pac Studio Panels allow the articulation, tonal balance, and clarity of your monitors to be heard, which optimizes your studio and sound system.

Easy Installation

PAC Studio Panel can be installed in minutes by following the simple instructions. A line level and full-sized template assist in placement of mounting hardware so the panels are perfect to begin with.
